

BatchMaster ERP on Cloud

Make Your Move to the Cloud:
Faster, Easier, Risk-free!

BATCHMASTER[®]
Process Manufacturing Software

BatchMaster ERP on Cloud

BatchMaster ERP on Cloud is a **SaaS-based ERP** software that lets process manufacturers manage their business from anywhere, and at any time, and helps them grow it in a scalable and affordable way. With it, numerous businesses have rid themselves of the need of having lots of servers, heavy IT infrastructure at their sites, or demanding expensive upgrades and maintenance, and are enjoying benefits such as faster implementation, lower costs, top-class security, and real-time insights, among others.

Cloud ERP that's tailored to your industry!

With BatchMaster ERP on Cloud, manufacturers get the experience, expertise and reliability of world's leading process manufacturing ERP solutions provider to efficiently handle and optimize the entire value chain of their businesses operating in food and beverage, pharmaceutical, paints, coatings, chemicals, and cosmetics sectors, and their different sub-sectors.

Equipped with a modern, simple and intuitive UI and a great UX, BatchMaster's [Cloud ERP](#) delivers a number of business functionalities that are specific to the process industries, including R&D and formulation in particular, and MPS & MRP, purchase, sales, finance, inventory management, costing, production, quality control, and compliance, in general. Its primary industry-specific capabilities, coupled with the ability to generate in-context analytics, empower manufacturers to realize their full potential.

Key Features

Accessibility: Get real-time access to business information from anywhere, anytime, and on any device, so that your employees across the different units & geographical locations can work with the same data.

Agility: Get up and running in virtually no time, as there's no selecting and setting up hardware, or hiring and training of IT staff involved. Drive business agility with its smarter workflows, faster reporting, and real-time analytics.

Scalability: It grows along with your business, and comes with unparalleled capacity to handle the increased complexity associated with business growth, so that you can address the challenges and demands that come alongside.

Compliance & Security: Offers higher degree of information safety and ensures secure encryptions and better compliance, assuring you that your business data is always backed up, and has robust disaster recovery plans in place.

Unlimited Storage: No matter how big your data is, it is safely housed in our data centers. So, without worrying about managing or storing data, programs and company files, just enjoy access to your business data over the internet.

Customization & Integration: Can be easily and seamlessly customized to fit the evolving needs of your business, and can integrate well with other cloud-based products, without downtime or need of additional hardware.

Updates & Upgrades: With BatchMaster ERP on Cloud, security updates and feature upgrades take as little as 30 minutes, and occur on an ongoing basis, keeping your business up-to-date with latest technology.

Cost Savings: With no need of heavy investment on the IT front, and also on maintaining the servers, support, upgrades' installation, service packs, and security fixes, this [Cloud based ERP](#) delivers significant cost savings.

Core Capabilities

The multitude of functionality available in BatchMaster's different modules listed below is far too extensive to be covered adequately within this short overview, yet we have tried to cover as much as we could.

Laboratory & Formula Management

- Separation of formulas from finished goods packaging bills of material.
- Formula security with approval, status, and complete audit trail tracking.
- Formula version control with roll-back capability
- Embed QC test, special instructions and costs.
- Dynamic reformulation based upon ingredient characteristics, product weight, volume and cost.
- Perform formula "what if" analysis and side by side comparisons.
- Define multiple fill-levels and packaging sizes of the products with the same recipes.

Traceability & Compliance

- Control formula access and maintain change history log.
- Track your products from receipt to shipment and vice-versa.
- Speed up lot recalls and audits.
- Design and print nutritional labels and supplemental information panels.
- Generate bi-directional lot traceability reports and specific product labelling and industry standard compliance reports.
- Design and produce lot recall letters.
- Support FDA, 21 CFR Part 11, GFSI and cGMP requirements.

Planning & Scheduling (MRP/MPS)

- Minimize inventory, utility costs with the assurance that there will be no shortages during production.
- Direct transfer of MPS/MRP orders to purchase and production.
- Use real-time information of demand/supply for purchase discounts and optimization of batch production schedules.
- Capable of handling both make-to-stock (forecast) and make-to-order (SO) demands.
- Auto generation of production schedules based on the demand.
- Considers both purchase and QC lead time to ensure on-time delivery.

Inventory Management

- Maintain multiple units of measurements and conversions
- Manage lot controlled inventory based upon variable inventory characteristics, including quality status, expiration dates, and strength or potency values
- Manage inventory down to the bin level
- Perform physical counts against selected inventory
- Perform inventory revaluation
- Capture and track inventory adjustments and movements

Batch Production

- Dynamically size batch jobs.
- Prioritize and expedite specific batch production jobs.
- Auto-create production order against sales orders.
- Report shortages of required ingredients and materials.
- Reserve lot controlled inventory for batch jobs.
- Manage single super batch job consisting of multiple linked batch jobs.
- Adjust batch formula prior to batch job release and during WIP.
- Auto generate lot numbers for intermediates and finished goods.
- Mandate execution of QC tests and manufacturing instructions.
- Auto back flush consumed ingredients and materials.

Quality Control & Quality Assurance

- Establish library of standardized QC tests and sample plans.
- Define QC tests for formulas, raw materials, intermediates, and finished goods.
- Ensure the step by step completion of QC tests.
- Auto assign lot statuses and disposition lots, based upon QC test results.
- Analyze QC tests results by item, lot, batch job and vendor.
- Auto-generation of non-conformance for failed QC tests with provision of CAPA.

Product Costing

- Calculate expected finished good costs, including intermediates and assemblies, based upon the cost rollup of ingredients and packaging materials, as well as labour, setup and other production costs.
- Dynamically resize formulas to meet target costs.
- Perform 'what-if' cost scenarios.
- Compare costs for same formulas in different packaging configurations.
- Reevaluate finished goods costs based on line item price-lists, special pricing and discount offers.

Sales Management

- Easily generate sales quotations and orders, and handle returns.
- Single click transfer of quotes to order, and order to shipment.
- Volume-based scaled pricing, discounts, and mark-ups.
- Confirm and processes shipments, partial shipments, and back orders, and check inventory for parts' availability.
- Define contracts & warranty, and generate sales reports, picklist, invoices, BOL, and COA.

Purchase Management

- Create purchase requests, purchase orders, and define approvals.
- Maintain several price-list options to manage purchases, returns, and blanket agreements.
- Real-time dashboard to analyze & assess vendor, discounts, tax, contract, and other information.
- Support to supplier management, audit warnings, and purchase of cGMP material only from item-specific vendors.
- Achieve real-time synchronization of goods receipts and inventory warehouse levels.

Finance

- Streamline your financial operations by maintaining ledger, journal entries, tax calculations, multi-currency transactions and banking activities.
- Manage cash flow, track budgets, and compare actual versus plans to see where your business stands at a moment's notice.
- Integration of financial operations in real-time with other business processes, for example purchasing and sales, to improve visibility into cash flow.
